

ANNOUNCEMENT

Norman Hay plc announces major supply contract awarded to TAM International Hong Kong Limited.

Norman Hay plc – is pleased to announce that TAM International Hong Kong Limited, part of its Construction Chemicals Division, has secured a £2.6m contract.

The contract is a joint venture with Dragages – Nishimatsu, and is for the supply of approximately 8,000 metric tones of TAM's TamCrete MFC product, which will be used in the design and construction of Hong Kong West Drainage Tunnel.

The Hong Kong West Drainage project comprises of a single 10.2km long hard rock TBM tunnel with a 7.2 internal diameter together with 35 shafts and 35 adits, giving an additional 12km of various diameter tunnels.

Due to a tight limit on allowable water ingress, the rock mass ahead of the tunnel face requires injection of a Microfine Cement material to seal any water borne cracks and fissures in the rock strata, prior to the excavation of the rock by the TBM (Tunnel Boring Machine).

TAM International Hong Kong were asked to carry out site trials long with other competitors, to establish the most suitable material to meet the project requirements. TAM HK and TamCrete MFC both came first in terms of technical service and material performance.
